Technical (and Soft) Skills

Tech: Systems Architecture,(Type-compiled, contemporary (**TypescriptS/ES6+**)) **Javascript**. - **Node** and Browser runtimes. - FE Markup / Styling **(React)** - **Python** - **GraphQL** (preferred) and REST - Relational and NoSQL DB's - **'Serverless'** architecture, espc. **AWS (Lambda, DynamoDB, APIGateway, StepFunctions, SQ-NS,** - **IaC**, espc. w/ *Serverless* framework, and CloudFormation, incl containerization. **Object Oriented** (Some Java / C#) and modern Procedural/Functional programming. **DevOps**, some **SRE**.

'Soft': Application ***Architecture*** and ***System Design***, especially as related to web applications: "What are we building? Why that way?". ***Communication***, especially as it relates to ***curiosity*** and desire to learn. ***Respect and Empathy***, especially as it's fundamental to the previous points. Presentation/Document creation

Experience

JULY 2022 - PRESENT

American Express - Atlanta, GA – *Software Engineer*

An opportunity with better incentives, including personal-career incentives to *return to pure software-engineering* with new 'blank-slate' coding/building opportunities arose in financial technology (Kabbage Inc which had been bought by Amex right as I was joining). Although I did spend time doing basic Data Engineering/Science related jobs early on, along with a brief time fixing the *Gatsby*-Static site generated frontend and improving the React component portability, I've spent all of my recent time up to now building from scratch, an internal tool to begin to act as a new 'surface' or data-plane for a much bigger internal application which serves as the Customer Service operators interface to a lot of the marketing-specific info, data, a 'ticketing' system for customer interactions, etc.

APRIL 2021 - JULY 2022

Airbus - Atlanta, GA – *Software Engineer*

Brought on as a full-stack engineer to a *predictive-maintenance* application , my first months spent narrowly focussed on building a '*predictive trends*' microservice/backend. Although I did help some new eng's with work on the front-end/ui of the application, I spent the majority of my time coding a standard cloud backend (aws lambda, graphql, dynamoDB, etc).
Later in my time with Airbus I was asked, and accepted an add-on role of' engineer-liaison', a new position to help merge the gap between airlines, pilots, maintenance personnel, and how the software works and what it could provide.

APRIL 2017 - APRIL 2021

Inovo / Salesforce-Web Consultant, Atlanta – *Engineer / Consultant*

Entry into software industry started through contracted (upwork, etc) work at first as primarily a frontend web developer usually solo (combined 'design' and project-lead utilizing a basic React (relying on both Create-React-App and manual **Webpack** builds. Backend, content, and user customization handled through a variety of CMS'.
Later studied and began work on **Salesforce** projects including Lightning **Web Components** (An attempt to 'reactify' Salesforce development), server-side templating with Salesforce proprietary Apex language (Java derivative).

Relevant Education

AUGUST 2019 - FEBRUARY 2020

DigitalCrafts Full-Stack Flex Program, Atlanta – *Certificate*

Invested in myself to re-sharpen my engineering/development skills picked up in the previous years. While React was the main frontend focus, extensive work and training was received on building REST backends (Node / Express). Culminated in my own solo personal project BeachMe!. Although I had already been using React and other front-end tools (Sass, etc). This 'bootcamp' definitely allowed me some great personal connections and exposure to a full-stack approach to application development.

AUGUST 2005 - AUGUST 2010

Georgia State University Atlanta – *B.A. Political Science*

A Few Accomplishments

Certified Flight Instructor (In progress)
Commercial Pilot License - 2018
Instrument Flying Rating - 2017
